48	CARROT FENCE NETTING CLIP

Anti Carrot-Fly Fence will put a stop to the low flying carrot-fly, a pest for gardeners of carrots, parsnips, parsley and celery.

Erecting our 1m high fence will stop the fly in its tracks. It also helps to form a barrier against rabbits, cats and rodents.

Ensure the barrier is complete with no open ends or sides.

It is simple to erect and dismantle and will stand 1m (3ft) once assembled. Just push the poles into the soil 20cm (8"), space at about 1.4m (approx 4ft 7in). Clip the netting on using the netting clips provided (3 per pole).
