

GREEN HOOP TUNNEL

(LENGTH) 3.9M

CONTENTS

5	GREEN FLEXIBLE HOOP
10	FLEXIBLE ANCHORS

1	COVER
15	GREEN HOOP CLIPS 10MM
4	STEEL PEGS

ASSEMBLY PROCESS

STEP 1: Select the starting point in your garden and insert the first anchor into the soil, measure 1.2m (for the width of your tunnel) and insert the second anchor. The hoops are flexible so you can increase/decrease the width of your tunnel if required. We don't recommend going any narrower than 75cm.

STEP 3: Insert your first hoop into the erected anchors, taking care that the hoop does not spring back.

STEP 4: Continue this process to create your tunnel.

STEP 5: When all the hoops are erected, lay your netting over the top, securing with the clips. Use two steel pegs at each end of the tunnel to finish securing the netting.

We have been generous with the fabric width allowing you to bury the sides or use stones if necessary.

Please Note: If due heavy forecast of snow please remove cover beforehand.
