CONTENTS

11	BLACK FLEXIBLE 900MM HOOP - SINGLE
2	BLACK FLEXIBLE HOOP JOINER CROSS
2	BLACK FLEXIBLE HOOP JOINER TEE

1	COVER
12	BLACK HOOP CLIPS 10MM
4	STEEL PEGS

ASSEMBLY PROCESS

STEP 1: To create your starting and end hoops connect two rods together with a tee joiner, to create the centre hoop/hoops connect two rods together with the cross joiners.

STEP 2: Place the starting hoop into the ground and insert a rod. The rods are 900mm so the spacing between each rod will be the same.

STEP 3: Repeat this process while making sure the cross joiners are in the middle and the tee joiners are at the end. When all the hoops are erected, lay your netting over the top, securing with the clips. Use two steel pegs at each end of the tunnel to finish securing the netting.

STEP 4: We have been generous with the fabric width allowing you to bury the sides or use stones if necessary.

Please Note: If due heavy forecast of snow please remove cover beforehand.
