

GREENHOUSE INSULATION KIT (W) 10FT X (L) 6FT

CONTENTS

B	FLEECE 30G 4M X 5M
C	FLEECE 30G 2M X 5M
1	GREENHOUSE INSULATION CLIPS (PK 80)
1	GREENHOUSE CORNER INSULATION CLIPS (PK 16)

ASSEMBLY PROCESS

STEP 1: Included in this kit are 2 pieces of fleece and 2 packs of clips. The largest piece of fleece fits the longest sides of the greenhouse (B), it goes up to the apex and down the other side all in one piece (A).

STEP 2: Starting at the bottom of the greenhouse secure the fleece with the clips, and corner clips for the corners. We have allowed approximately 5 clips per glazing bar.

STEP 3: The clips fit by pushing into the glazing bar and turning. The fleece pushes onto the point, then fit the washer flat side onto the fleece and turn to lock.

STEP 4: Next measure or just cut in half the other piece of fleece this is for each end (C).

STEP 5: As all greenhouses vary in size slightly you may have some fleece left over. This can be used for extra protection on your seed trays or bedding plants.

The fleece is re-usable.
